

# Breakout session I

## Cooperation and competition – Is there a new market in European quality assurance?

Main suggestions for the internationalisation of European QA for 2020

- Move away from concept of market and competition, look at drivers of internationalisation
- No more regulation, but agency reviews should cover international cross border activities
- A mechanism to track problems to help treat them, possibly in the context of a new WG
- Use more international experts – even requirement
- Continue cooperation among agencies
- Fixed price?
- No need to add anything else as such but be familiar with national contexts
- If we think about internationalised experts trained in different contexts instead of adding international standards?
- We are internationalised by means of the ESG review. That's a guarantee
